

Nylofume[®] bags: The trusted way to protect food, feed, drugs and medicinals from fumigations with Vikane[®]

Nylofume bags are made from a special nylon polymer film. Research has shown that these nylon polymer bags are very effective for protecting a wide variety of commodities from Vikane fumigations when used one inside the other. The Nylofume bags should be "doubled-up" before you fill them with items that need protection.

All items such as food, feed, drugs and medicinals not adequately packaged (including those items in refrigerators and freezers) must either be removed from the structure being fumigated or sealed in the protective Nylofume bags.

To ensure a tight seal, please follow these instructions carefully:

1. While bags are still empty place one inside another.

2. Place items inside the inner bag. Do NOT overfill — leave clearance on top for closure of the bags.

3. Twist the top of the inner bag, fold once and secure the fold in place using tape or a twist tie.

4. Repeat Step 3 with the outer bag.

5. Check the seal by pressing gently against the sides of the bag and listening for air leaks. No air should be able to escape.
